Education

Bachelor of Applied Mathematics and Statistics
Institute of Technology of Cambodia (ITC)
Year 4| Expected graduation 2028

Relevant coursework
Machine Learning, Numerical Analysis, Database Systems, Statistical Modeling, Data Visualization

Skills

Programming
Python, SQL, R

Libraries
NumPy, Pandas, Scikit-learn, PyTorch

Machine Learning & Statistics
- Regression & Classification
- Neural Networks (CNNs)
- PCA & Autoencoders
- Time-Series Forecasting (SARIMA)
- Numerical Methods

Tools & Platforms
Jupyter, Tableau, Excel, MySQL, Git, Streamlit Cloud, Render

Core Strengths
Data cleaning & wrangling, EDA, visualization, model evaluation, technical documentation

Language

- Khmer – Native
- English – Professional working proficiency
- French – Intermediate (B1)

Professional Summary

Fourt-year Applied Mathematics and Statistics student with hands-on experience across the full data science pipeline: data cleaning and feature engineering, statistical modeling, machine learning and interactive visualization. Project experience spans predictive modeling, time-series forecasting, dimensionality reduction and applications deployed on Streamlit Cloud and Render. A collaborative team member seeking a data science or machine learning internship to apply quantitative skills to real-world problems.

Projects

Cambodia Trade Forecasting – GDP, Exports & Imports (2017–2025)

Independent research project

- Built linear regression and SARIMA models across five macroeconomic trade series to project Cambodia's trade trajectory.
- Reconstructed derived series under identity constraints and produced a full technical write-up.

Image Classification with PyTorch

Personal project | Deployed to Streamlit Cloud

- Designed, trained and debugged a convolutional neural network for multi-class image classification, resolving initialization, normalization and training-stability issues.
- Deployed a live interactive demo on Streamlit Cloud.

Dimensionality Reduction: PCA vs. PyTorch Autoencoder

Machine Learning coursework

- Compared linear (PCA) and non-linear (autoencoder) techniques on the Iris and UCI Wine Quality datasets.
- Evaluated reconstruction quality and cluster separability.

Customer Churn Prediction

Machine Learning coursework

- Built a logistic regression model reaching 81% accuracy in predicting telecom customer churn, including feature selection and model evaluation.

Clinic Management Web Application (Flask + MySQL)

Full-stack project | Deployed on Render

- Developed a full-stack clinic management system with a normalized relational schema.
- Resolved environment and cross-platform database issues; deployed with a cloud-hosted MySQL backend.
